

Old world wisdom. New world technology.

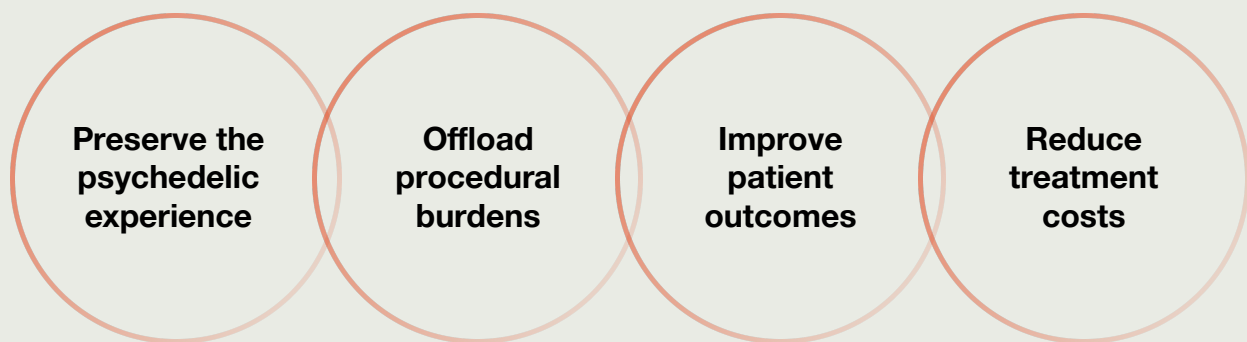

Increasing accessibility and outcome longevity
of psychedelic psychotherapy

PRACTITIONER PACK

For curious practitioners seeking smarter ways to
deliver psychedelic-assisted therapy (PAT).

Merging Tech Expertise and Academic Excellence.

Enosis believes in a research-first approach and turns only evidence based solutions into publicly available products, that:

**Psychedelic psychotherapy is a
breakthrough in mental healthcare -
but it brings new challenges.**

- High cost of on-site medical supervision
- Missed therapeutic insights during dosing sessions
- Administrative burdens distracting from clinical focus
- For some patients, outcomes may fade too quickly

Enosis tools transform these challenges into clinical advantages.

“The science is robust.
The infrastructure is not.”

“Building tech born out of research, we solve the unseen
hurdles of psychedelic care... before they become the
bottleneck of our industry.”

InSight VR

RemoteRx

Enosis App

AVAILABLE NOW

InSight VR

A structured, self-paced integration program

InSight VR enables an individual to record, retain, explore and expand on the benefits from their psychedelic and therapeutic sessions, from the comfort of their home.

Developed to support the unique aspects of PAT, InSight VR is suitable for all patients undergoing psychedelic therapy, regardless of treated condition or psychedelic substance used.

It leverages the unique capacity of VR technology and Enosis' patent pending approach to:

- Catalyze inner focus thanks to complete buffering of external cues
- Capture the unique nature of meaningful therapeutic moments through multisensory recordings
- Fully engage with with reflective exercises thanks to an interactive process that builds directly on the patient's specific, individually unique recordings of the experience

The InSight Journey

During preparation, InSight VR is used during or in between therapy sessions, to record intentions and become familiar with immersive inner work.

After the psychedelic session, patients express and record tangible, audio-visual representations of their insights and emotions.

In subsequent therapy sessions, practitioners guide patients as they revisit their anchored memories.

Following the conclusion of therapy sessions, patients access a series of reflective exercises to explore their recorded memories more deeply.

IN TRIAL

RemoteRx

A remotely activated, app-enabled drug safe

RemoteRx reduces the reliance on a nurse or a doctor to be physically present during dosing sessions that are managed purely by psychotherapists.

Instead they are able to maintain the chain of custody of medication and direct administration to the patient in the room via a 2-factor authentication tech solution developed by Enosis.

COMING SOON

Enosis App

A bespoke scribing and data capture tool

The Enosis App is a dedicated tool and data aggregation platform for therapists and patients, connected together via a unified back-end data repository.

It captures all significant information, from preparation, dosing and integration sessions to then be available to both patient and therapist in raw, analysed and spatially represented formats.

Effortless Onboarding

Enosis offers personal training for practitioners to ensure safe and effective use of its tools.

World-First Study

A world-first study of applying VR to psychedelic therapy was conducted using the Enosis VR Integration tool. Results showed:

> 90%

Match between specific emotions experienced post-dosing and those re-evoked with the use of Enosis VR during integration (compared to integration alone)

Demonstrably stronger recall of psychological and emotional content from session to session with the use of Enosis VR (compared to integration alone)

This is what the participants who received Enosis VR Integration tool said:

"It was great because I managed to gather and collect the memories that I would be unable to keep for myself otherwise."

"VR helped me get in touch with thoughts and feelings and also sorted out the difference between those thoughts and feelings."

"VR helped me to reflect on the experience, it kept the marvel; you're not tripping anymore but you are reminded by this magic vision."

Enosis is embedded within the Clinical Psychedelic Lab at Monash University and collaborates with leading international research partners.
